Designed with Executive Ergonomics, Unity incorporates Pelvic Balance Point® technology, which ensures that both men and women are supported and comfortable, and T1-L5 Free Shoulders® design, which allows workers to adopt postures that bring more movement, and more oxygen, to their bodies.

**Adjustments include:**

- Seat Height
- Backrest Height
- Tilt Tension
- Tilt Lock

## Pelvic Balance Point®

When in the tasking position, most men sit rolled back on their ischial tuberosities (“sit bones”) while most women sit rolled slightly forward on these “sit bones” – in other words more upright and forward in their chairs. Unity allows for this fundamental difference. This **Pelvic Balance Point®** (PBP) design technology allows you to adjust your positioning on the seat in relation to the backrest for optimum support and comfort.

## T1-L5 Free Shoulders® Design

Unity backrest, with its **T1-L5 Free Shoulders®** design, curves in at the sides to provide lumbar and kidney support, and curves away behind the shoulder blades. This allows your shoulder and chest muscles to release when in an upright or reclined position, reversing that hunched-shoulder feeling you get from mousing and keying. As a result, your chest expands and you can breathe more air into your lungs, which improves circulation and delivers oxygen to the spine and brain.
